iDev40

ECSEL JU

The project iDev40 is co-funded by the ECSEL Joint Undertaking, grants from Austria, Belgium, Germany and Spain as well as the European Structural and Investment Funds. It is coordinated by Infineon Technologies Austria AG.

- 1. On information and imagination**
- 2. “Unproven statements” (new phenomena)**
- 3. Oscillating mind-body system (OMB), challenges for DNN’s**
- 4. Holistic information and linear (simplified quantum) computing**
- 5. Conclusions**

Wolf Singer, German neuroscientist (2013):

- **The brain is by no means a stimulus driven, but a self-active system.**

1. On information and imagination

Claude Shannon
(1916 – 2001)
American
mathematician,
engineer

Carlo Rovelli
(* 1956),
Italian
physicist

Information = (structural coupling)law + potentiality

new phenomena might appear
(,realisation` of imaginary-valued
system states)

- **Information is relative**
- **Information is a function**

(world of physics, chemistry) -> quantitative equations, total reduction

$$y = f(x)$$

$$y = f(x_n)$$

intrinsic structure

(world of biology) -> qualitative equations, reduction to domains

$$y = y_{n+1} = f(x_n)$$

2. “Unproven statements” (new phenomena)

Kurt Gödel (1906 – 1978)
Austrian-American
mathematician

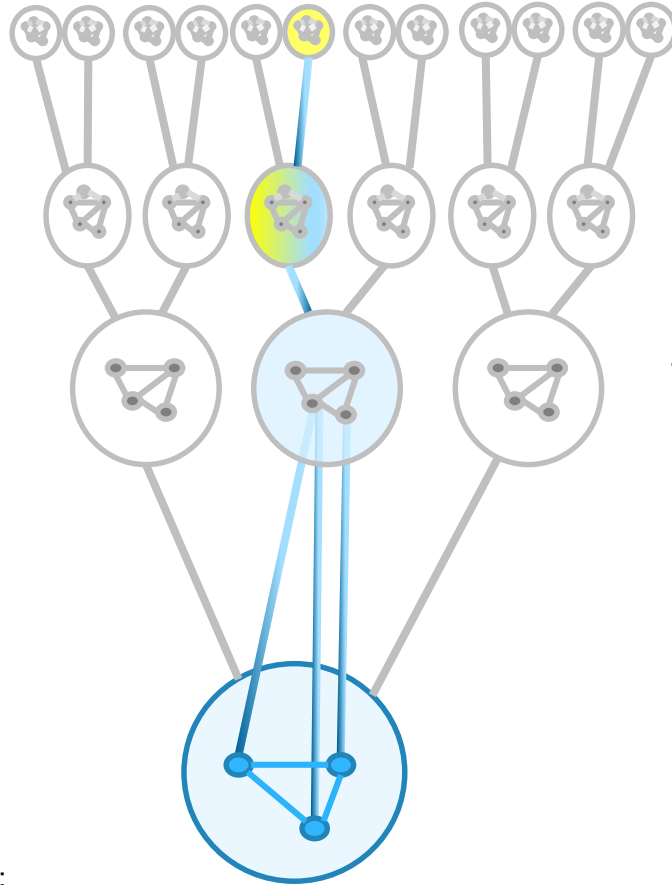

George Spencer Brown
(1923 – 2016), British
mathematician

- **Information is recursive; the “meaning-marker” oscillates**

Birth of the self:

- Surfing on waves
- Self measuring
- Collapsing in “unproven statements”

Physically damped, oscillating system:

- Energy gets pumped into the system
- Imaginary valued damping ('impedance'), fed by imaginary target structure (emerging physical fields)

“Self active system”:

1. Information: Structural Self-coupling
 2. Imaginary dimension: Eigenvalues / imaginary roots -> “unproven statements” via “meaning-marker”
 3. biological systems are predominately related to their history, and the emergence of structural coupling: continuous formation of several levels of organization (Poised to criticality)
 4. Ontological Perceptiveness / “unique law” of biological systems
- >What we perceive as “information” is the tendency of nature to “complete” itself

Longo, G.; Montévil, M.; Pocheville, A. (2012): From bottom-up approaches to levels of organization and extended critical transitions. In: Frontiers in PHYSIOLOGY. published: 17 July 2012, doi: 10.3389/fphys.2012.00232

Damasio, Antonio: The Strange Order of Things: Life, Feeling, and the Making of Culture, Pantheon 2018

3. Oscillating mind-body system, challenges for DNN's

Clive Wearing – phenomenological richness of episodes / knowledge

herpes simplex virus, most severe cases of amnesia

semantic / music memory works (recall condition)

He lost his orientation in time (losing the capability to create new competences, or even to maintain existing ones).

his conscious experience is entirely in the present (Suddendorf et.al. 2009).

phenomenological richness of imagined events as well as the number of such events decreases.

Clive Wearing cannot imagine future or remember past episodes, not to speak about creating further meaning of his life.

He has lost contact to higher dimensional phase spaces, which would require further structural development of the self.

How can musicians keep playing despite amnesia?

<https://www.bbc.co.uk/news/magazine-15791973>

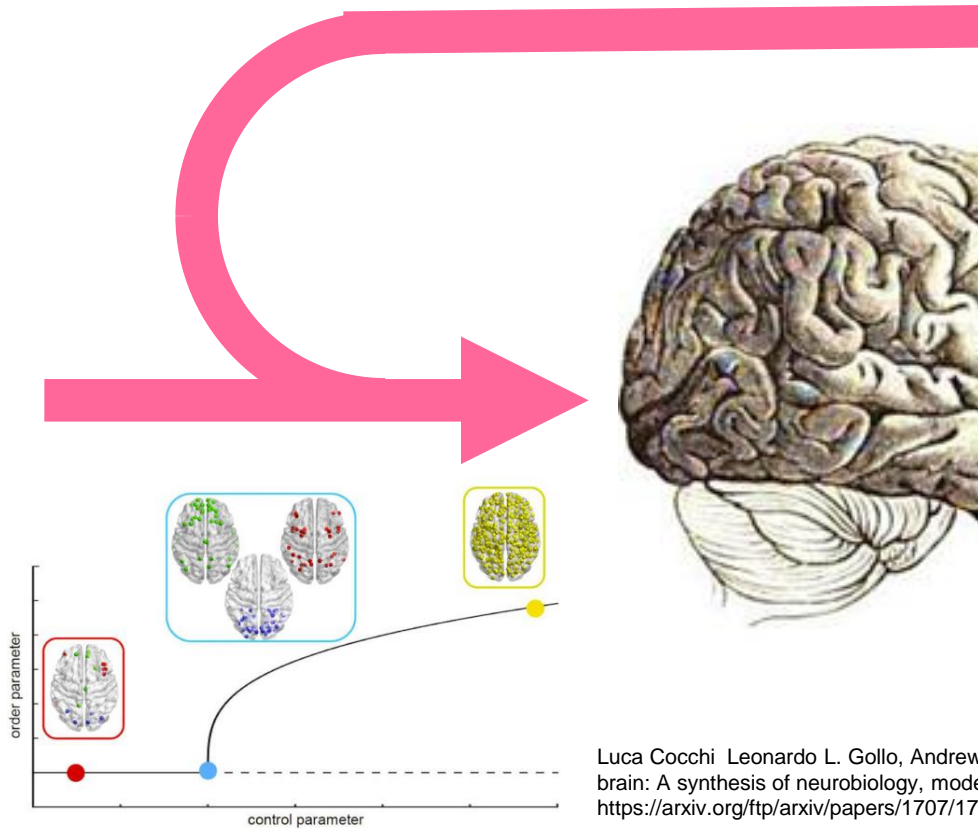

$$V(t) = A * e^{-i(\omega t - \Phi)}$$

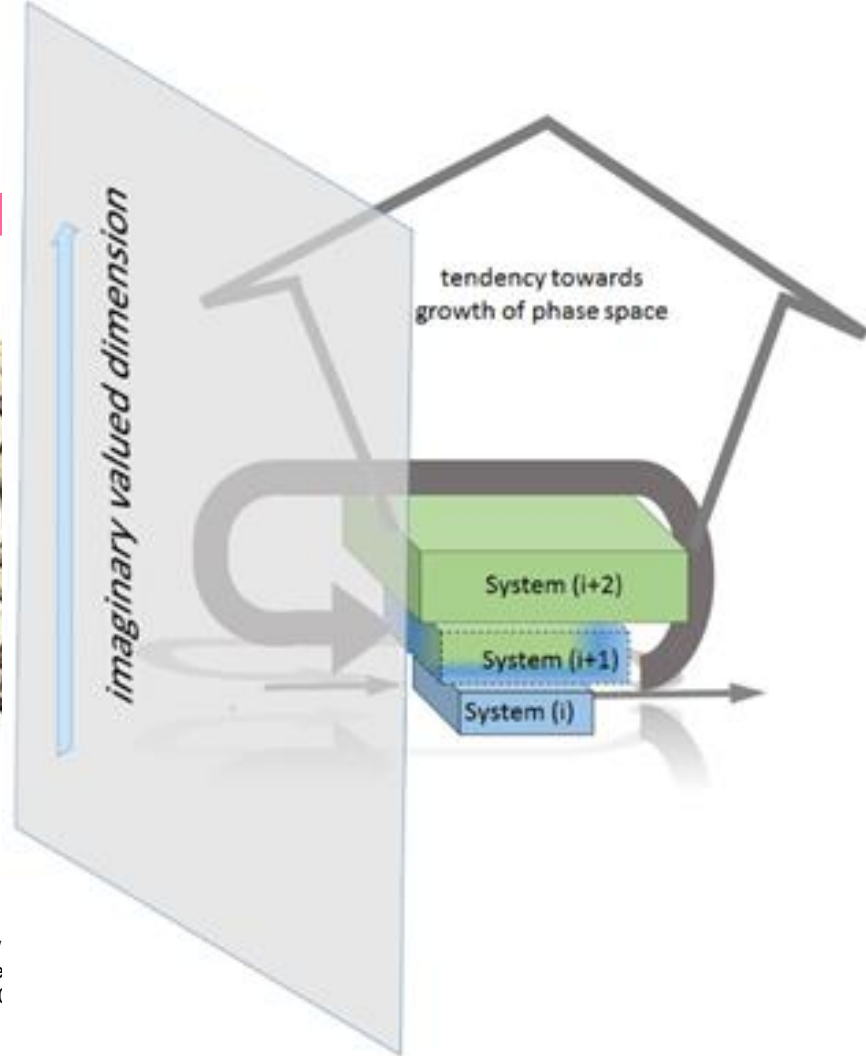

2nd law

**new episode/
paradigm**

Mapping of knowledge between domains

1. Holistic Information and linear (quantum-like) computing

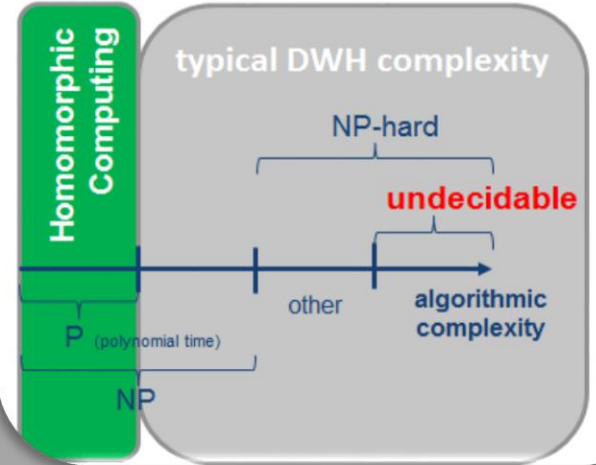

Complexity – comparison to quantum computing:

Classical:	Grover (Quantum):	HIM:
Write: $O(n)$	-	$O(n)$
Read: $O(n^2)$	$O(n^{\frac{1}{2}} \sqrt{n})$ $O(n)$	$O(n)$

Advanced Fab Analytics

Algorithmic Complexity

- Information = (structural coupling)law + potentiality
- Information is relative – no “final truth”
- “Deep knowledge” composes of rich episodes and imagination of the future
- Methodological support required to enable success of DNN’s

Summary:

Engineering and also society demands comprehensive understanding and further development of AI / DNN’s

Upcoming ideas in physically inspired neuroscience

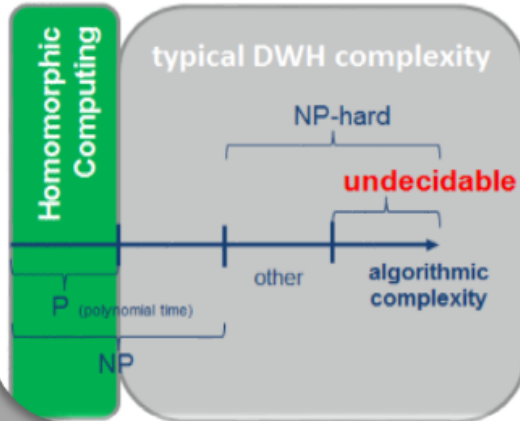

Thank You!

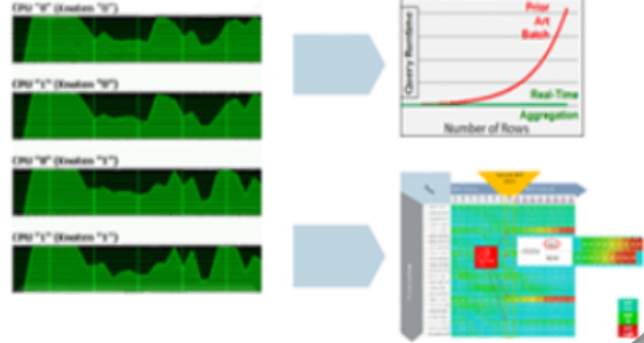

Holistic Information and simplified linear (quantum-like) computing

Algorithmic Complexity

Best Mapping to Hardware

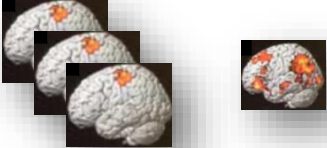

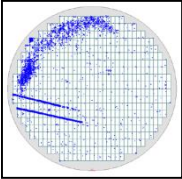

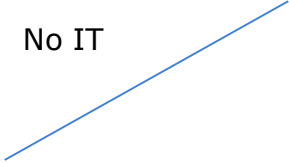

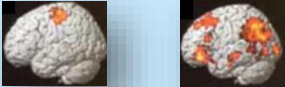

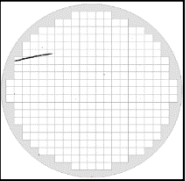

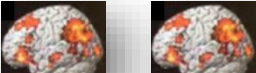

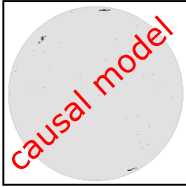

Complexity – comparison to quantum computing:

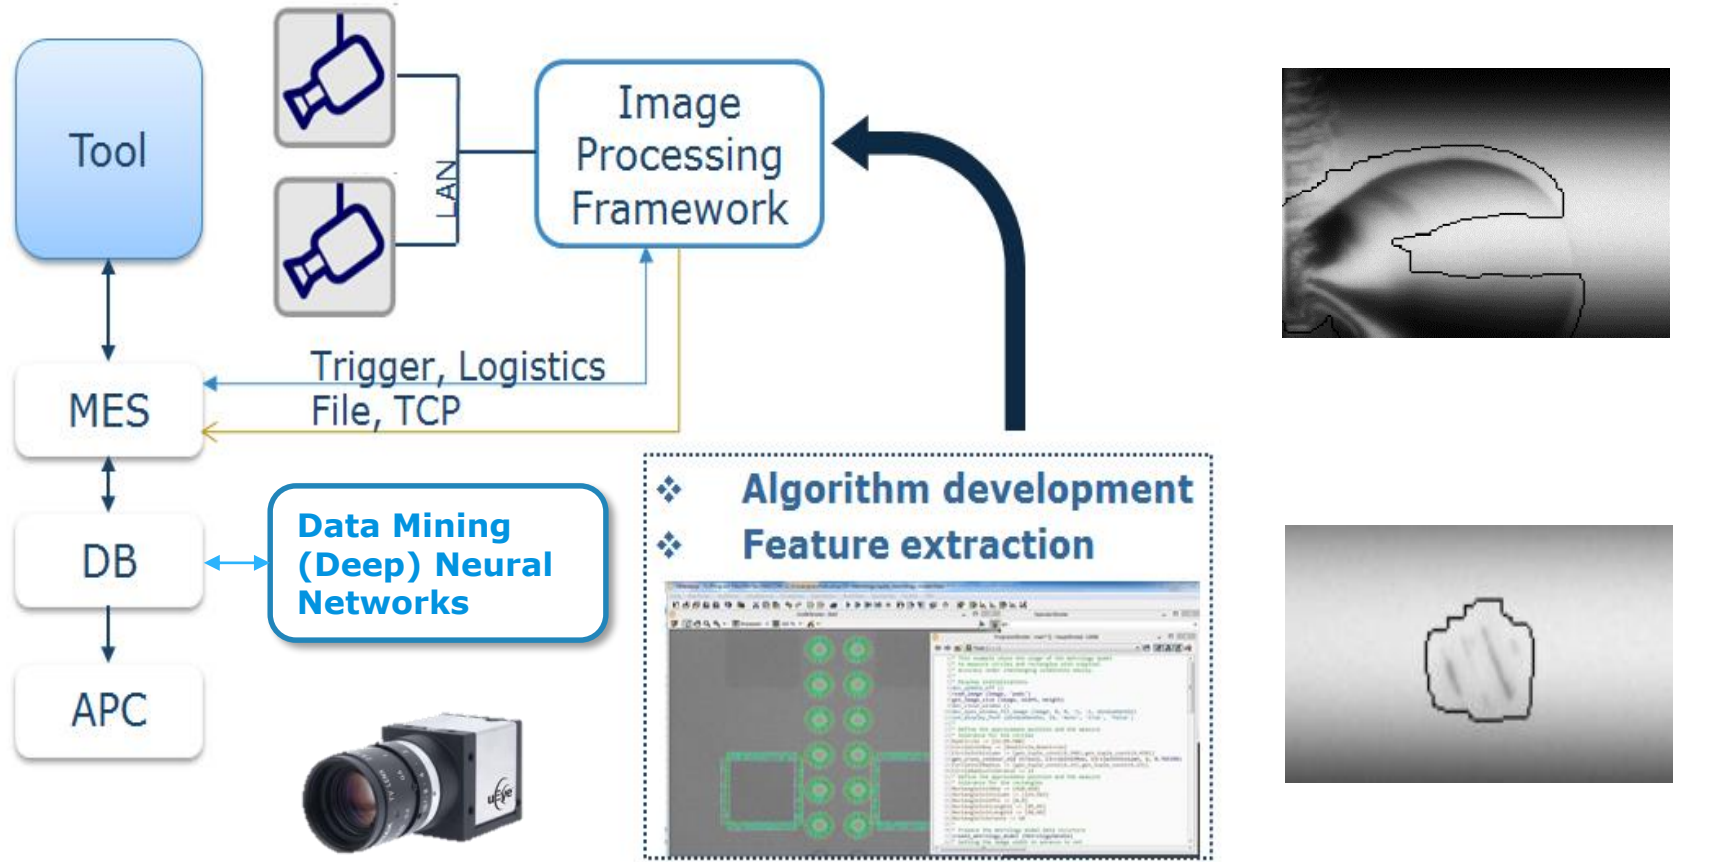

Classical:	Grover (Quantum):	HIM:
Write: $O(n)$	-	$O(n)$
Read: $O(n^2)$	$O(n^+ \sqrt{n})$	$O(n)$
	$O(n)$	

The change of DDE characteristics from the 90's to > 2020

Year	Type of Control	Example for Defects	Cognitive
90's	<ul style="list-style-type: none"> Manual inspection by operator 	 <p>big scratches</p> <p>Formula / Algorithm: $y = f(x)$</p>	<ul style="list-style-type: none"> No IT Operator guided Few engineering support 
2000 - 2020	<ul style="list-style-type: none"> Semi-automated inspection by microscope / SEM 	 <p>small scratches</p> <p>Formula / Algorithm: $y = f(x) + f'(x)$</p>	<ul style="list-style-type: none"> Decision guided inspection Demi-autonomous DDE inspection
> 2020	<ul style="list-style-type: none"> Highly-automated inspection methods, including machine learning 	 <p>causal model</p> <p>fine spots</p> <p>Formula / Algorithm: $y = f(x) + f'(x) + f''(x)$</p>	<ul style="list-style-type: none"> Advanced engineering guided Mostly autonomous DDE inspection assistance systems
